ABSTRACT

This report presents information on Follow Through supportive services (medical, dental, psychological and social) and parent involvement in 18 Philadelphia public schools for the 1974-75 school year. Medical services information indicated that, despite the fact that seven schools had no medical contracts until January or later, contracted services were utilized by 1,732 pupils (71% of those referred) for treatment of medical problems. Dental contracts were negotiated by some schools earlier in the school year, with 1,611 pupils (85% of those referred) receiving treatment; in addition, five schools utilized non-contracted agencies where 571 more children were treated for dental problems. Due to increased personnel costs, psychological services were minimal: only 9 of 18 schools had any form of contracted service, with 192 pupils (57% of those examined) treated for psychological problems. In terms of social services, 9,396 home visits were made to Follow Through families during the school year, and 4,968 families received aid from social service personnel. In the parent involvement component, Follow Through parents donated a total of 47,483 volunteer hours, an average of 8 hours per parent. Recommendations include employment of school psychology interns and provision of transportation for better use of contracted services. (Author/BF)

Documents acquired by ERIC include many informal unpublished materials not available from other sources. ERIC make effort to obtain the best copy available. Nevertheless, items of marginal reproducibility are often encountered and this affe quality of the microfiche and hardcopy reproductions ERIC makes available via the ERIC Document Reproduction Service (EDRS is not responsible for the quality of the original document. Reproductions supplied by EDRS are the best that can be ma the original.

ABSTRACT

Information on supportive services and parent involvement was collected on a monthly basis using forms developed by the local evaluation staff (see appendix).

Medical services information indicated that despite the fact that seven schools had no medical contracts until January, 1975 or later, 1732 pupils (71% of those referred) were treated for medical problems by contracted services. Apparently one of the major reasons why children who are referred do not receive treatment is that parents are unable to or, in any case, do not keep appointments.

Dental contracts were negotiated somewhat earlier and 1611 pupils (85% of those referred) were treated. In addition, five schools utilized non-contracted agencies where 571 more children received treatment, i.e., a total of 2,182 pupils were treated for dental problems.

Due to increased personnel costs, psychological services were minimal with only 9 of 18 schools having any form of contracted service. As a result, 192 pupils (57% of those examined) were treated for psychological problems.

In terms of social services, 9,396 home visits were made during the school year and 4,968 (82%) families received aid from social service personnel.

The parent involvement component continued to function well, with only one Policy Advisory Committee (PAC) operating at a minimal level. A total of 47,483 volunteer hours (or an average of 8 hours per parent) were donated to the program by Follow Through parents.

INTRODUCTION

The following report describes the level of medical, dental, psychological and social services, and parent involvement in the eighteen Follow Through schools in Philadelphia. The data were collected on a monthly basis using forms developed by the local evaluation staff (see appendix).

Each section is preceded by a description of services to the total program, and discusses the attainment of Title I Objectives, which are mandated for programs receiving Title I funds.

MEDICAL SERVICES

TOTAL PROGRAM

As can be seen from Table 1 medical screenings for the total program numbered 11,318 (over 100% of the total Follow Through population) although it should be noted that these figures represent multiple screenings given by the school nurse and physician. For seven schools (see Table 1a) during the first half of the school year (September to December) there was no information given about referrals to contracted services because the contracts were not made until late in the year, and at two schools there were no contracted services. The total number of referrals to contracted services for the program was 2437 (40%). The total number of children treated was 1732 (71% of those children referred).

In terms of Title I Objectives, i.e., to provide an effective form of medical services, sixteen of eighteen schools achieved complete attainment of this objective on the first criterion, that 100% of the total enrollment in each school will be screened at least by school health services. The two remaining schools partially attained the criterion; they indicated screening for 8% and 70% of the pupils respectively.

The second criterion stipulated that 80% of the pupils referred to contracted medical services would be treated. Eight of the schools had complete attainment in this respect; three other schools had percentages ranging from 68 to 79 and were considered to have achieved partial attainment. Five schools did not reach attainment of the criterion and two schools did not have contracted services.

Arthur
E.M. Stanton

- Rebound Medical Group, Inc.

Although there was no formal Follow Through Contract with Rebound Medical Group, Inc. all children at the two schools were eligible for free health services. If the families were on DPA[1], these funds were used to support the program. Services included: screening pediatric histories, physical and developmental examinations, laboratory screening, X-rays, referrals to specialty services and acute care treatment. Detailed information was not provided by the agency, but the table below indicates the number of children who were referred for medical services in the Follow Through Program at Arthur and at E. M. Stanton.

a. These figures represent multiple screenings given by the school nurse and physician.

1. Department of Public Assistance

Drew - Presbyterian Hospital

Medical services at Drew were not contracted until April, 1975. Services were provided by a physician, an intern and two nurse practitioners, and included medical histories, physical examinations, laboratory screening and referrals to specialty services. Also, the hospital agreed to take care of emergencies for Drew Follow Through children during the summer, until the August 1975 contract expiration date. The following table indicates the number of children at Drew who received medical services.

SCHOOL	FT Pop.	No. of Chn. Screened		No. of Chn. Referred				No. of Chn. Treated Contracted

Elverson
Ferguson
Harrison
Pratt-Arnold

St. Christopher's Hospital (November 1974-April 1975)
and
Jefferson Hospital (April 1975-June 1975)

Medical services at these six schools were provided by a pediatrician and a nurse from St. Christopher's Hospital. However, in April 1975 the pediatrician moved to Jefferson Hospital and the contract was transferred to this agency. A community worker was hired through the contract to work with parents.

Services included medical histories, X-rays, laboratory screening, physical examinations and referrals to specialty services. As in the 1973-74 year, a preventive program was continued which included: weight control classes for parents, a nutritional program for iron deficiency, and home visits to inform parents of good nutritional habits. The medical staff visited each of the schools about once a week to examine children at the school site and follow-up treatment was conducted in the nurse's office. The table following indicates the number of children serviced by this agency:

Medical Services: St. Christopher's Hospital and Jefferson Hospital

SCHOOL	FT Pop.	No. of Chn. Screened		No. of Chn. Referred				No. of Chn. Treated

Pratt-Arnold	569	1924	100+	562	99	102	18	397	71

a. These figures represent multiple screenings given by the school nurse and physician.

c. Percentages for those treated who were referred to contracted services.

Fulton
Kelly - Covenant House Health Services
Wister

Medical services for these three schools are reportedly provided by pediatricians who are on call 24 hours a day, seven days per week, pediatric nurses, health aides, an ophthamologist, and an ear, nose and throat specialist. Services included: medical histories, physical examinations, laboratory screening, and referrals to specialty services. In addition, access to the same services was available to siblings of Follow Through children as well as a family planning service for mothers. A Public Health nurse or pediatric aide visited homes when the medical or social situation required it. The following table indicates the number of children for whom medical services were made available:

SCHOOL	FT Pop	No. of Chn Screened		No. of Chn. Referred				No. of Chn. Treated	
				Contracted		Non-Contr.		Contracted	
		Sept.-June		Sept.-June		Sept.-June		Sept.-June

Wister	483	397	82	290	60	40	8	302	100+

a. These figures represent multiple screenings given by the school nurse and physician.

c. Percentages for those treated who were referred to contracted services.

Ludlow - St. Luke's Hospital

Medical services were not contracted for Ludlow until February, 1975. A physician, a nurse and laboratory technicians provided services to the Follow Through children at Ludlow. Services included: medical histories, X-rays, laboratory screening, physical examinations and referrals to specialty services.

The Follow Through School Community Coordinator escorted children to the hospital which usually ensured better use of the services available.

SCHOOL	FT Pop.	No. of Chn. Screened		No. of Chn. Referred				No. of Chn. Treated Contracted	
				Contracted		Non-Contr.

a. These figures represent multiple screenings given by the school nurse and physician.

c. Percentages for those treated who were referred to contracted services.

d. Twenty-three children were also treated by non-contracted services.

McMichael
Wilson - Children's Hospital

Follow through children at Wilson were screened for physical examinations and referred to specialty services. However, these two schools did not have contracted medical services until May and June, 1975 respectively. Although the contract extended to August, 1975 no information pertaining to the number of children treated was provided (see table below).

SCHOOL	FT Pop.	No. of Chn. Screened		No. of Chn. Referred				No. of Chn. Treated	
				Contracted		Non-Contr.		Contracted

	N	N[a]	%	N	%	N	%	N	%[c]
McMichael	525	930	100+	500	95	57	39	0	0
Wilson	330	443	100+	0	0	101	30	0	0

a. These figures represent multiple screenings given by the school nurse and physician.

c. Percentages for those treated who were referred to contracted services.

Nebinger - Southeast Neighborhood Health Center

The full range of medical services was offered to Follow Through children at Nebinger. However, the contract was not approved until January, 1975 so that services were not available from September to December. The Follow Through School Community Coordinator escorted children to the Center and medical personnel visited homes in severe cases. The following table indicates the number of children who received medical services:

SCHOOL	FT Pop.	No. of Chn. Screened		No. of Chn. Referred				No. of Chn. Treated Contracted	
				Contracted		Non-Contr.			
		Sept.-June		ept.-June		Sept.-June		Sept.-June

Nebinger	360	285	70	195	54	36	10	155	79

a. These figures represent multiple screenings given by the school nurse and physician.

c. Percentages for those treated who were referred to contracted service.

Stevens - Jefferson Hospital

The full range of medical services was offered to Follow Through children at Stevens. However, no contract was made until March, 1975. Seventy-eight percent of the children were screened by the school nurse but only ten children were referred to the contracted medical team. As can be seen from the table below it appears that contracted services were not utilized by the Stevens school.

SCHOOL	FT Pop.	No. of Chn. Screened		No. of Chn. Referred				No. of Chn. Treated	
				Contracted		Non-Contr.		Contracted	
		Sept.-June		Sept.-June		Sept.-June		Sept.-June

Stevens	115	303	100+	1	0	25	22	0	0

a. These figures represent multiple screenings given by the school nurse and physician.

c. Percentages for those treated who were referred to contracted services.

Waring - Hahnemann Hospital

Medical services were provided by a physician, a nurse and a laboratory technician. Services included: physical examinations, laboratory screening and referrals to specialty services. One thousand and eighty-five screenings were conducted by the medical staff, but only ten children received treatment through contracted services which went into effect in January 1975. The school nurse indicated that the contract was not utilized because no escort service was provided.

SCHOOL	FT Pop.	No. of Chn. Screened		No. of Chn. Referred				No. of Chn. Treated Contracted	
				Contracted		Non-Contr.

a. These figures represent multiple screenings given by the school nurse and physician.

c. Percentages for those treated who were referred to contracted agencies

e. 132 children were also treated by non-contracted services.

DENTAL SERVICES

Dental Services for Total Follow Through

As can be seen from the following table, 4,023 children or 66% of the total Follow Through population was screened for dental problems. No dental screenings were reported for two schools and figures were minimal for two others (16 and 17 children respectively). The total number of students referred to contracted dental services was 1,901 or 31%. Six schools had no contracted dental services. However, an additional 12% (720) of the total Follow Through population were referred to non-contracted services. Of those children referred to contracted services, 1611 or 85% were treated. In addition, 79% (571) of those children referred to non-contracted services received treatment.

In accordance with the Title 1 objective, i.e., to provide an effective form of dental services, the first criterion for attainment of this objective was the expectation that 100% of each school's enrollment would be screened for dental problems by school health services, at least. This expectation was met by 7/18 schools and approached by five others (62% to 98%). Six schools did not attain the criterion.

The second expectation, that 80% of the referred students would be treated by contracted services, was met by six schools and partially satisfied by six others with percentages of 44-69. The remaining six schools did not have contracted dental services.

Arthur
E. M. Stanton - Rebound Medical Group, Inc.

As with medical services, the Rebound Medical Group Inc. offers dental services to all children at these two schools and DPA monies are used to pay some of the expenses. Two dentists are available to Follow Through children and the services offered are comprehensive.

At Arthur, approximately 98% of the Follow Through population was screened for dental problems and 100%+ referred for dental care. At Stanton, 187 (78%) of the children were screened for dental problems, but no information was available concerning referral and treatment. The table below indicates the number of children who received dental services.

Drew

McMichael - University of Pennsylvania

Wilson

As in the 1973-74 year, dental services to these three schools are provided by three dental instructors, 12 dental students and three dental assistants. Services include: dental examinations, charting, X-rays, extractions, fillings, orthodontics, endodontics, prophylaxis, polishing amalgams and fluoride treatment.

At Wilson, the children are transported by trolley and are accompanied by the Follow Through School Community Coordinator. Consequently, 97% of the 222 children referred for dental care were treated. At Drew, 26 children (59% of those referred) were treated, whereas 68 children (61%) were treated at McMichael.

It was reported that less than half of the monies allocated for dental services were utilized, and that transportation and escort services would facilitate utilization of contracted services.

The table below indicates the level of dental services provided:

SCHOOL	Tot. FT Pop.	No. of Chn. Screened for Dental Ser.		No. of Chn. Referred to Dental Services				No. of Chn. treated by Dental Services[a]

a. Percentages for those treated who were referred to dental services.

Duckrey - Carver Dental Clinic (non-contracted)

At Duckrey, there was no contracted agency and the School District's Dental Unit did not come to the school this year. As a result, there was no record of the number of children screened by the staff. The school did however, provide transportation and escort services for children to the Carver Dental Clinic and 129 children (100% of those referred) were treated by non-contracted services. See the table below for the number of children who received dental services.

Dunbar
Elverson - Girard Dental Center

Services offered at Girard Dental Center by two dentists included: a dental examination, charting, extractions, fluoride treatment, X-rays, prophylaxis, orthodontics and fillings. The School District's Dental Unit screened the total Follow Through population at (283 children) for dental problems. Of those screened 235 were referred to contracted dental services. The Follow Through Community Coordinator assumes responsibility for escorting children to the center.

Although the Elverson school did have a contract for dental services most services were paid for by DPA monies. The number of children treated by contracted dental services was 133 (58% of those referred to contracted services). See the table below for services.

Ferguson - Private Dentists

A private dentist provides dental care to Follow Through children at Ferguson. Services offered include: dental examinations, charting, fillings, extractions, X-rays, prophylaxis and flouride treatment. The dentist came to the school with a portable unit to treat students, and 331 children, i. e., the total Follow Through population were treated for dental problems. The table below indicates the number of children who received services.

SCHOOL	Tot. FT Pop.	No. of Chn. Screened for Dental Ser.		No. of Chn. Referred to Dental Services				No. of Chn. treated by Dental Services[a]

a. Percentages for those treated who were referred to dental services.

Fulton - Private Dentist

A private dentist is contracted to provide dental care to Follow Through children. Services include: dental examinations, charting, fillings, extractions, X-rays, prophylaxis and fluoride treatment. All Follow Through children were screened for dental problems, and 68 children were treated. The table below indicates the number of children who received dental services.

SCHOOL	Tot. FT Pop.	No. of Chn. Screened for Dental Ser.		No. of Chn. Referred to Dental Services				No. of Chn. treated by Dental Services[a]

a. Percentages for those treated who were referred to dental services.

Harrison - Private Dentist

At Harrison a private dentist was contracted in February, 1975 to provide dental services to Follow Through children. A dental assistant is also made available. Tokens are provided to cover transportation costs. Of the 149 children referred for dental care 65 children were treated for dental problems. The table below indicates the number of children who received dental services.

Kelly
Wister - Private Dentist

The services of a private dentist were contracted at both Kelly and Wister. According to the information provided, it appears that the School District's Dental Unit did not screen children for dental problems. As can be seen from the table below 22 children were treated for dental problems at Kelly and 118 were treated at Wister. It was reported that both schools were extremely dissatisfied with the quality of service provided, and therefore made minimal use of the contract. See the table below which indicates the number of children who received dental services.

SCHOOL	Tot. FT Pop.	No. of Chn. Screened for Dental Ser.		No. of Chn. Referred to Dental Services				No. of Chn. treated by Dental Services[a]

Ludlow - District 6 Health Center (non-contracted)

Comprehensive dental care is provided by the District 6 Health Center, which is free to all children. The Follow Through School Community Coordinator escorts children to the Center, and 152 children were treated by non-contracted services for dental problems. The table below indicates the number of children who received dental services.

SCHOOL	Tot. FT Pop.	No. of Chn. Screened for Dental Ser.		No. of Chn. Referred to Dental Services				No. of Chn. treated by Dental Services[a]

Nebinger - Southeast Philadelphia Neighborhood Health Center

Dental services to Follow Through children are provided by a dentist and a dental hygienist at Southeast Philadelphia Neighborhood Health Center. The Follow Through School Community Coordinator escorts children to the center. One hundred and eighty three children were referred to contracted services and 69% (126) received treatment. The table below indicates the number of children treated for dental problems.

SCHOOL	Tot. FT Pop.	No. of Chn. Screened for Dental Ser.		No. of Chn. Referred to Dental Services				No. of Chn. treated by Dental Services[a]

PSYCHOLOGICAL SERVICES

TOTAL PROGRAM

Due to budgetary allocations requiring the shifting of funds to meet continually increasing personnel costs, psychological services were minimal in the 1974-75 year. Only 9/18 schools had any form of contracted psychological service and in many cases this service amounted to no more than one day per week. The table on the following page indicates the level of service at those schools which had contracts.

In terms of Title 1 objectives, i.e., to provide an effective form of psychological services, it was expected on the first criterion, that 80% of the pupils referred would be examined by a contracted agency. Four of the 9 schools which contracted for psychological services showed complete attainment on this criterion; 4 others showed partial attainment with at least 60% of the referrals being examined. One school did not satisfy the criterion.

On the second criterion, that either treatment or consultation be provided by the agency for 100% of those examined, six schools gained complete attainment; two others had partial attainment (62% and 57% of the examined received treatment). One school did not satisfy the criterion.

a. services provided at McMichael and Harrison focused primarly on staff development activities.

b. figures for May and June not provided.

SOCIAL SERVICES

TOTAL PROGRAM

As can be seen from the table on the following page, 9,396 home visits were made during the school year to Follow Through families and 4,968 families (82%) received aid from Follow Through social service personnel.

In terms of Title 1 objectives, i.e., to provide an effective form of social services, it was expected on the first criterion, that at least 85% of each school's families would be visited at least once by the Follow Through School Community Coordinator during the school year. Ten of the 18 schools attained this objective.

The second criterion for this objective required that the coordinator be consistently engaged in case-work-like activities with at least 50% of the families identified as having this need. Seven of the 18 schools met this criterion completely; seven others showed partial attainment, i.e., had percentages in the 26 to 49 range. Four schools did not meet this criterion.

BANK STREET

Dunbar

Elverson

E.M. Stanton

As in the 1973-74 year, the Dunbar school contracted the services of a social worker for one day a week, in addition to the regular services provided by the Follow Through School Community Coordinator. At Elverson, parent scholars assist in visiting Follow Through families and in providing information and help with the use of services in the community. This scholarship program sponsors four parents for a six to eight week period and then a new group of parents are brought on board. The following table indicates the level of social services at the Bank Street schools:

SCHOOL	Total FT Population	No. of FT families visited				No. of families who received aid from soc. service personnel

BEHAVIOR ANALYSIS

Arthur

Duckrey

Pratt-Arnold

As in the 1973-74 year, the services of a social worker were contracted for one day per week at both Arthur and Pratt-Arnold in addition to the services provided by the Follow Through School Community Coordinator. The two Coordinators at Duckrey are not funded out of Follow Through but one has been assigned to work with Follow Through families. The following table indicates the level of social services at each of the three Behavior Analysis schools:

SCHOOL	Total FT Population	No. of FT families visited				No. of families who received aid from soc. service personnel			
		Sep.-Dec.	Jan-June	Tot. Year		Sep.-Dec.	Jan-June	Total Year

BILINGUAL

Ferguson

Ludlow

Waring

As in the 1973-74 year, the Ferguson school contracted the services of a social worker and a bilingual counselor in addition to the regular services provided by the Follow Through School Community Coordinator. The coordinator at Ludlow was aided by two parent scholars who also visited Follow Through families. The following table indicates the level of social services provided at each of the Bilingual schools:

SCHOOL	Total FT Population	No. of FT families visited				No. of families who received aid from soc. service personnel

1. Harrison School

PARENT INVOLVEMENT

TOTAL PROGRAM

As can be seen from Table 1, in the program as a whole 4,213 parents helped with PAC related activities during the year. The number of parents who attended one meeting or affair was 8,117 and the number of volunteer parents for the year totaled 4,161.

With respect to the Title I Objective, i. e., to provide an effective level of parent involvement, 14 of 18 schools achieved complete attainment on the first criterion, that the Parent Advisory Committee (PAC) in each school work with at least two community groups on a common project in the course of the year. Two other schools had partial attainment, i. e., worked with at least one community group. Two schools did not satisfy the criterion.

On the second criterion, that at least 70% of the parents in each school attend at least one general school meeting or affair during the year, 14 of the 18 schools had complete attainment. Two other schools showed partial attainment, i.e., indicated that at least 48% of the parents attended a meeting. Two schools did not show attainment of the criterion.

BANK STREET

Dunbar

Elverson

E.M. Stanton

The table on the following page indicates the level of parent involvement at each of the three Bank Street schools.

The Bank Street schools indicated that they worked with other community agencies. For instance, the Dunbar school worked with the R. W. Brown Boys Club. The Stanton school parents met with some members of the staff from Graduate Hospital to discuss improvement of its services to the community. They also attended a Four-H Council meeting to determine what that organization could offer their community. At Elverson, the parents worked with the Boy Scouts and the Advocate Community Development Corporation.

Parent Involvement: Bank Street

SCHOOL	Total FT Population	No. of PAC Members Monthly	No. of Parents who Helped with PAC During the Year		No. of Parents who Attended One Meeting or Affair During the Year[c]		No. of Parent Scholars Monthly	No. of Volunteer Parents for the Year		No. of Volunteer Hours for the Year

BEHAVIOR ANALYSIS

Arthur

Duckrey

Pratt-Arnold

The table on the following page indicates the level of parent involvement at each of the three Behavior Analysis schools.

The Arthur and Pratt-Arnold schools indicated that their respective PAC's worked in conjunction with other community groups. At Arthur, the PAC works with the YMCA Action Library to tutor students in the afternoon. At Pratt, the PAC worked with such organizations as the Community Church and the Masons during their annual Christmas party. The Duckrey school did not report that the parent group worked with other community groups.

Parent Involvement: Behavior Analysis

BILINGUAL

Ferguson

Ludlow

Waring

The table on the following page indicates the level of parent involvement at the three Bilingual schools. Each of the schools indicated that their respective PAC's worked in conjunction with other community groups. For example, Ferguson reported working with PAAC during the year and Ludlow reported working with Model Cities Hub #12, the Ludlow Civic Association and the Community Action Council. Waring joined efforts with Hahnemann Hospital for a successful health-fair as well as working with the American Cancer Society.

Parent Involvement: Bilingual

EDC

Fulton

Kelly

Wister

The table on the following page indicates the level of parent involvement at each of the three EDC schools.

Each of the schools reported PAC's worked in conjunction with other community groups. At Fulton, the PAC worked with Germantown Settlement to provide additional facilities and services to Follow Through children. The Kelly PAC worked with the Northwest Community Neighbors Association and the Germantown YWCA. The Wister school parents worked with Holsey Temple (a Head Start Center), Wissahickon Boys Club and the Boy Scouts.

PHILADELPHIA PROCESS AND (PARENT IMPLEMENTED)[1]

Drew

McMichael

Wilson

Harrison

The table on the following page indicates the level of parent involvement at each of the schools.

All four schools indicated that their respective PAC's worked in conjunction with a variety of community groups. Parents at Drew participated with the 16th Police District in a community workshop, and with Grace Lutheran Church to tutor students. The McMichael parents worked with the West Philadelphia Boys and Girls Club. The Wilson school's parents worked jointly with the Southwest Community Center in tutoring children. At Harrison the parents worked with Episcopal Hospital on its Mental Health Programs.

SUMMARY

Medical services information indicates that 11,318 screenings were provided by School Health Services to the Total Follow Through population. Forty percent of the total population was referred for medical problems and 1732 children (71% of those referred) were treated by contracted services. In terms of Title I objectives, 16 of 18 schools achieved complete attainment of the first criterion, i.e., that 100% of the total enrollment in each school be screened at least by School Health Services. The second criterion stipulated that 80% of those pupils referred to contracted medical services would be treated. Eight schools had complete attainment in this respect and three others had partial attainment.

Dental services information indicates that 4,023 children or 66% of the total Follow Through population were screened for dental problems. Thirty-one percent were referred for dental problems and 1611 or 85% of those referred were treated by contracted services. In addition, 571 children were treated by non-contracted services. In terms of Title I objectives, 7 of 18 schools met the first criterion that 100% of each school's enrollment would be screened for dental problems and five additional schools approached the criterion. The second criterion stipulated

that 80% of the referred students would be treated by contracted services. This was met by six schools and partially satisfied by six others. Six schools did not have contracted services but utilized community agencies.

Due to increased personnel costs, psychological services were minimal in the 1974-1975 year, with only 9 of 18 schools having any form of contracted service. A total of 192 children (57% of those examined) were treated for psychological problems and 247 parents were seen by psychological personnel. In terms of Title I objectives, 4 of the 9 schools which had contracted services attained the first criterion, i.e., that 80% of the pupils referred would be examined by a contracted agency. Four other schools showed partial attainment. The second criterion stipulated that either treatment or consultation be provided by the agency for 100% of those examined. Six schools gained complete attainment and two others showed partial attainment.

Social services information indicates that 9,396 home visits were made during the school year to Follow Through families and 82% of the Follow Through population received aid from social service personnel. In terms of Title I objectives it was expected on the first criterion that at least 85% of each school's families would be visited at least once by the Follow Through School Community Coordinator during the school year.

Ten of the 18 schools attained this criterion. Seven schools also met the second criterion; i.e., that the coordinator be consistently engaged in case-work-like activities with at least 50% of the families identified as having this need.

The parent involvement component continued to show good progress, with a total of 8,117 in attendance at meetings during the year, and 4,161 volunteer hours donated by Follow Through parents to the program. In terms of Title I objectives, 14 of 18 schools achieved complete attainment on the first criterion, i.e., that the PAC at each school work with at least two community groups. Similarly, 14 of 18 schools showed complete attainment of the second criterion, i.e., that at least 70% of the parents in each school attend at least one general school meeting or affair during the year.

CONCLUSIONS and RECOMMENDATIONS

As noted in previous reports, the provision of escort services and transportation ensures better use of contracted services. In a few instances, monies allotted for medical or dental services were barely utilized because of the lack of such provisions. In addition, the delayed negotiation of many contracts, which in turn seemed related to reduced funding, hindered the delivery of services.

School Health Services provided more extensive screening in the medical area than in the dental area, where it appears that at least 4 schools were not visited by a dental team all year. Psychological services have suffered the most from increased personnel costs, and it appears that the use of School Psychology Interns is the most economical way of providing extensive service, even though such service lacks some degree of continuity, due to a changeover in personnel each University Semester.

Although budgetary constraints make the effective delivery of supportive services difficult, a closer investigation of the use of DPA monies to alleviate the financial strain has been recommended in the past, and is planned for the 1975-1976 school year.
